

FRAC SAND WET/DRY/RESIN COATING PLANTS

With over four decades of experience designing and building precise sand systems for automotive foundries, including GM, Ford and Chrysler, Mouat began designing and building sand plants for the frac sand industry as the industry emerged in 2008. Over the past decade, Mouat has designed facilities for some of the leading companies in the industry including EOG Resources, Preferred Sands and Fairmount/Santrol.

Mouat's technical expertise in process control provided a niche in building resin coating plants when Mouat began in the industry. The level of control required for the addition of resin, water and surfactant was very precise and critical to the process. The ability to engineer and control the process has been equally critical to the design of the wet and dry plants.

Mouat's success in this field is not only a direct result of our innovation and long history of quality projects, but it is also a result of our overriding commitment to our customer - a value that we maintain as an unquestionable standard of doing business.
